Organised Abuse

This FAQ provides an overview of organised abuse, including its definitions, characteristics, methods, effects on survivors, and the challenges involved in identifying and responding to it. It is intended as an educational resource for survivors, therapists, researchers, support workers, and others seeking to understand the subject.

The term organised abuse encompasses abuse involving multiple perpetrators, coordinated activities, or networks in which individuals may work together to facilitate, conceal, or continue the exploitation of victims. It can involve children, adults, families, and vulnerable individuals.

1. What is organised abuse?

Organised abuse refers to abuse involving multiple perpetrators who act together, either through formal arrangements or informal networks. The abuse may be planned, repeated, and facilitated by individuals who share access to victims or work together to conceal their activities.

It can include physical abuse, sexual abuse, psychological abuse, emotional abuse, exploitation, trafficking, and other forms of coercion.

2. Is organised abuse the same as organised crime?

No. Although the two can overlap, they are not identical.

- Organised abuse describes coordinated or networked patterns of abuse.
- Organised crime refers to criminal activity conducted by groups or networks for financial or other material benefit.

Some organised abuse involves criminal networks, while other cases occur within families, institutions, communities, or social groups.

3. What is the difference between organised and ritual abuse?

The terms are sometimes used interchangeably, but they have different meanings.

- Organised abuse is a broad term covering abuse involving multiple perpetrators or coordinated activities.
- Ritual abuse refers to abuse alleged or documented to occur in connection with rituals, ceremonies, ideological practices, or symbolic activities.

Not all organised abuse is ritualistic, and not all allegations of ritual abuse establish that an organised group exists.

4. Where does organised abuse occur?

Organised abuse can occur in a variety of environments, including:

- Families and extended family networks.

- Religious or spiritual communities.
- Schools and educational settings.
- Residential care facilities.
- Institutions and organisations.
- Social and recreational groups.
- Criminal networks.
- Online environments.

The setting alone does not establish that organised abuse is taking place.

5. What forms can organised abuse take?

Organised abuse can involve several forms of maltreatment, including:

- Sexual abuse and exploitation.
- Physical assault and torture.
- Emotional and psychological abuse.
- Coercive control and intimidation.
- Human trafficking and forced labour.
- Child exploitation.
- Financial exploitation.
- Threats, blackmail and extortion.
- Neglect and deprivation.
- Online sexual exploitation.

u.w. ozian

Different forms of abuse may occur simultaneously.

6. Who can be affected by organised abuse?

Anyone can become a victim of organised abuse. However, children and individuals who are socially, economically, or otherwise vulnerable may face increased risks of exploitation.

Victims may be targeted because of their age, circumstances, dependency, isolation, or limited access to protection.

7. How do perpetrators maintain control over victims?

Perpetrators may use a combination of coercive and manipulative tactics, including:

- Threats of violence.
- Intimidation and humiliation.
- Isolation from friends and family.
- Financial dependency.
- Blackmail.
- Manipulation and deception.
- Physical restraint.

- Threats against family members.
- Exploitation of personal vulnerabilities.

These methods can make it difficult for victims to disclose abuse or seek assistance.

8. Why might victims not disclose organised abuse?

There are many reasons why victims may not disclose abuse immediately. These can include fear of retaliation, shame, threats, dependency, confusion, trauma, and concern that they will not be believed.

Children may also lack the language or understanding necessary to describe what has happened to them.

9. Does organised abuse always involve a hierarchy or leadership structure?

No. Organised abuse does not necessarily involve a formal organisation, central leadership, or clearly defined roles.

Research into group-based child sexual exploitation has identified networks ranging from loosely connected individuals to more structured criminal groups. Some perpetrators may know one another through family relationships, friendships, employment, or shared social activities.

u.w.ozian

10. Can organised abuse involve multiple generations of a family?

Yes. Abuse can occur within extended family networks and may involve several generations. Family members may participate directly, facilitate access to victims, conceal abuse, or fail to protect children.

However, family relationships alone do not establish the existence of an organised abuse network. Each allegation requires individual assessment and investigation.

11. Can organised abuse occur within religious organisations?

Yes. Abuse can occur within religious institutions and communities, just as it can occur in secular organisations.

Individuals may exploit positions of authority, trust, spiritual influence, or access to children and vulnerable adults.

Religious beliefs or membership of a particular faith do not, by themselves, indicate involvement in abuse.

Organised Abuse

12. Can organised abuse involve online activity?

Yes. Digital technology can be used to facilitate abuse and exploitation.

Examples include:

- Online grooming.
- Coercion through social media.
- Threats involving intimate images.
- Production and distribution of child sexual abuse material.
- Online communication between perpetrators.
- Arranging meetings for exploitation.
- Blackmail and intimidation.

Online abuse may occur independently or alongside physical abuse.

13. What is grooming in the context of organised abuse?

Grooming is a process through which perpetrators manipulate and exploit another person to facilitate abuse.

It can involve establishing trust, providing gifts, offering attention, creating emotional dependency, testing boundaries, and gradually introducing abusive behaviour.

Grooming may also involve manipulating parents, carers, friends, or other individuals who could otherwise recognise and prevent abuse.

14. What is the role of facilitators in organised abuse?

Facilitators are individuals who assist or enable abusive activities without necessarily committing the direct abuse themselves.

Their activities may include:

- Providing access to victims.
- Arranging meetings or accommodation.
- Recruiting or grooming victims.
- Transporting victims.
- Concealing evidence.
- Threatening or intimidating victims.
- Providing financial or logistical assistance.

The extent of an individual's involvement must be established through evidence.

Organised Abuse

15. Can children and young people be involved in perpetrating organised abuse?

Yes. Although adults are frequently responsible for organised exploitation, children and young people can also participate in abusive activities.

Some may act independently, while others may be coerced, manipulated, groomed, or exploited by adults.

Their involvement should be assessed carefully, taking their age, circumstances, vulnerability, and actions into consideration.

College of Policing+1

16. What are some warning signs of organised abuse?

Potential warning signs depend on the circumstances and type of abuse. They may include:

- Repeated unexplained injuries.
- Unexplained absences or episodes of going missing.
- Sudden changes in behaviour.
- Fear of particular individuals.
- Unexplained gifts, money, or possessions.
- Signs of sexual exploitation.
- Threats or intimidation.
- Evidence of coercion or trafficking.
- Multiple individuals having inappropriate access to a child.
- Evidence of abuse being facilitated through an organisation or network.

w. ozian

No single indicator proves organised abuse is occurring. Warning signs should be considered alongside other information and investigated appropriately.

17. Why can organised abuse be difficult to investigate?

Investigations can be complicated by several factors:

- Multiple suspects and victims.
- Abuse occurring across different locations.
- Long periods between offences and disclosure.
- Victims being threatened or intimidated.
- Incomplete or missing records.
- Difficulties establishing connections between perpetrators.
- Institutional failures to report or respond to allegations.
- Limited cooperation between agencies.

Investigations often require coordination between police, social services, safeguarding professionals, and specialist investigators.

Organised Abuse

18. Can organised abuse continue for years?

Yes. Some cases involve repeated offending over extended periods.

Abuse may continue when perpetrators retain access to victims, when victims are prevented from reporting, or when organisations fail to recognise and respond to warning signs.

However, the duration and extent of abuse vary considerably between cases.

19. Can organised abuse involve human trafficking?

Yes. Organised abuse and human trafficking can overlap.

Trafficking may involve the recruitment, transportation, transfer, harbouring, or receipt of individuals for exploitation. Sexual exploitation, forced labour, and other forms of exploitation can occur within trafficking networks.

Not every case of organised abuse constitutes human trafficking, and not every trafficking case involves multiple perpetrators.

20. What is institutional abuse?

Institutional abuse occurs when individuals are abused within an organisation or institution, or when organisational practices and failures enable abuse to occur.

Examples include abuse within:

- Residential care homes.
- Children's homes.
- Schools.
- Religious institutions.
- Healthcare facilities.
- Sports organisations.
- Detention facilities.

Institutional abuse may involve individual perpetrators, multiple perpetrators, or failures of management and safeguarding.

21. What is the relationship between organised abuse and institutional cover-ups?

Institutional failures can allow abuse to continue.

Examples of documented institutional failures include:

- Ignoring complaints.
- Failing to investigate allegations.
- Discouraging victims from reporting.

- Protecting individuals accused of misconduct.
- Inadequate safeguarding procedures.
- Poor information sharing.
- Failure to report suspected criminal activity.

It is important to distinguish between documented institutional failures and allegations of deliberate, coordinated cover-ups. The latter requires evidence.

22. What psychological effects can organised abuse have on survivors?

Survivors may experience a wide range of psychological and emotional difficulties, including:

- Post-traumatic stress disorder (PTSD).
- Anxiety and depression.
- Feelings of shame and guilt.
- Difficulties with trust and relationships.
- Sleep disturbances and nightmares.
- Dissociation.
- Emotional dysregulation.
- Hypervigilance.
- Difficulties with personal boundaries.
- Feelings of isolation and powerlessness.

Not every survivor experiences the same symptoms. Individual responses depend on numerous factors, including the nature, duration, and circumstances of the abuse.

23. Can organised abuse have long-term physical effects?

Yes. Depending on the nature of the abuse, survivors may experience long-term physical consequences.

These can include injuries, chronic pain, sexually transmitted infections, reproductive health complications, and other physical health problems.

Survivors may also experience physical symptoms associated with prolonged stress and trauma.

24. Can organised abuse survivors experience difficulties remembering what happened?

Some survivors experience difficulties recalling traumatic events. Trauma can affect attention, memory, emotional processing, and the ability to organise autobiographical memories.

However, memory difficulties have multiple possible causes. Incomplete memories, fragmented recollections, or delayed disclosure cannot independently establish that abuse occurred.

Therapists should avoid leading questions, suggestive techniques, or attempts to recover supposedly hidden memories. Careful, non-leading assessment is important.

Organised Abuse

25. What is dissociation?

Dissociation is a psychological experience involving a disruption in the normal integration of consciousness, memory, identity, perception, or awareness.

Experiences can range from feeling detached from one's surroundings to more significant disruptions in memory or identity.

Dissociation can occur in association with trauma, but it is not exclusive to abuse survivors and is not proof of a particular type of abuse.

26. What is complex post-traumatic stress disorder (C-PTSD)?

Complex post-traumatic stress disorder is a recognised condition associated with prolonged or repeated traumatic experiences, particularly when escape is difficult or impossible.

In addition to the core symptoms of PTSD, C-PTSD can involve:

- Difficulties regulating emotions.
- Persistent negative beliefs about oneself.
- Feelings of shame or worthlessness.
- Difficulties maintaining relationships.
- Problems with trust and emotional intimacy.

u.v.mozian

Not all survivors of organised abuse develop C-PTSD.

27. Can survivors be re-traumatised when seeking help?

Yes. Survivors may experience additional distress when they encounter disbelief, insensitive questioning, inappropriate treatment, or repeated demands to recount traumatic experiences.

Other potentially distressing experiences include:

- Being blamed for the abuse.
- Having disclosures dismissed.
- Being treated without dignity.
- Experiencing breaches of confidentiality.
- Being subjected to unnecessary or repetitive assessments.

Trauma-informed services aim to provide respectful, safe, and appropriately supportive care.

28. What is trauma-informed care?

Trauma-informed care is an approach that recognises the potential effects of trauma on an individual's wellbeing, behaviour, relationships, and ability to engage with services.

Its principles include:

- Physical and emotional safety.
- Trustworthiness and transparency.
- Collaboration.
- Empowerment and choice.
- Respect for personal boundaries.
- Avoidance of unnecessary re-traumatisation.

It does not require professionals to assume that every reported experience has been independently verified.

29. Should therapists attempt to recover memories of organised abuse?

No. Therapists should not attempt to manufacture, uncover, or suggest memories of abuse.

Appropriate therapeutic practice involves supporting the client's present-day wellbeing without presuming what happened or encouraging a particular account of past events.

Therapists should use evidence-based approaches, avoid suggestive questioning, and distinguish between a client's reported experiences and independently established facts.

30. What should someone do if they suspect organised abuse?

If a child or vulnerable person may be at risk, appropriate safeguarding action should be taken.

Depending on the circumstances, this may involve:

- Contacting the police.
- Reporting concerns to child protection or adult safeguarding services.
- Seeking advice from a specialist safeguarding professional.
- Preserving relevant messages, records, and other potential evidence.
- Avoiding direct confrontation with suspected perpetrators where this could increase danger.

Immediate danger should be reported to emergency services.

31. What evidence may be relevant to an organised abuse investigation?

Evidence will depend on the alleged offences and circumstances. It may include:

- Witness statements.
- Victim and survivor accounts.
- Medical and forensic records.
- Photographs and video recordings.
- Electronic communications.
- Financial transactions.
- Travel and accommodation records.
- Institutional records.

- Physical and forensic evidence.
- Information establishing connections between suspects.

Investigators assess evidence collectively rather than relying on one indicator or account.

32. Are all allegations of organised abuse investigated in the same way?

No. Investigations vary according to the nature, seriousness, location, and complexity of the allegations.

Cases involving multiple victims, suspects, institutions, or locations may require specialist investigative teams and cooperation between different agencies.

33. Can survivors report organised abuse years after it occurred?

Yes. Historical abuse can be reported many years after the events.

A delayed report does not automatically invalidate an allegation. There may be practical difficulties in obtaining evidence as time passes, but historical allegations can still be investigated.

34. Can organised abuse survivors receive specialist support?

u.wozian

Yes. Survivors may access support through a range of services, including:

- Trauma-informed therapists.
- Specialist sexual violence services.
- Rape crisis organisations.
- Victim support organisations.
- Domestic and sexual abuse services.
- Adult and child safeguarding services.
- Specialist services for trafficking survivors.

The appropriate support will depend on the individual's circumstances and needs.

35. What is the difference between a survivor's account and an established finding?

A survivor's account is their description of their experiences. An established finding is a conclusion reached through an appropriate investigative, judicial, or other evidential process.

These are different categories of information and should not be confused.

Professionals should treat disclosures respectfully while maintaining appropriate standards of evidence and assessment.

Organised Abuse

36. Does the existence of organised abuse mean there is one large, coordinated network?

No. Documented cases demonstrate that organised and group-based abuse can occur, but they do not establish the existence of one universal network or a single coordinated organisation operating across different countries and communities.

The 2022 Independent Inquiry into Child Sexual Abuse (IICSA) examined organised networks involved in child sexual exploitation. Its findings describe networks with varying degrees of connection and organisation.

37. Is organised abuse always sexual?

No. Organised abuse is a broad term and can encompass different forms of exploitation and maltreatment.

It may involve physical violence, psychological abuse, financial exploitation, trafficking, forced labour, neglect, or sexual abuse.

The term should be understood in the context in which it is being used.

38. Why is accurate terminology important when discussing organised abuse?

Accurate terminology helps distinguish between different forms of abuse, patterns of offending, and levels of organisation.

www.ozio

It also helps professionals avoid confusing documented criminal activity with unverified allegations, assumptions, or interpretations.

Clear terminology supports better safeguarding, research, investigations, and communication between professionals.

39. What is the importance of recognising organised abuse?

Recognising organised abuse is important for several reasons:

- Protecting children and vulnerable adults.
- Identifying multiple perpetrators and potential victims.
- Preventing repeated exploitation.
- Improving safeguarding procedures.
- Holding perpetrators accountable.
- Addressing institutional failures.
- Providing appropriate support to survivors.
- Improving professional understanding through research and education.

Organised abuse requires careful attention because multiple perpetrators, overlapping relationships, and institutional failures can make identification and investigation particularly challenging.

Organised Abuse

40. What is the most important consideration when supporting survivors?

Survivors should be treated with dignity, compassion, and respect. They should not be blamed, ridiculed, intimidated, or pressured into disclosing information.

Support should be based on individual needs, appropriate clinical practice, safeguarding responsibilities, and reliable evidence.

Survivors deserve access to appropriate care regardless of whether criminal proceedings have taken place.
